

Liftgate LED Light Strip 18+ Jeep Wrangler JL

Contents:

- (1) Liftgate LED Light Strip
- (1) Remote
- (1) Resistor
- (1) Wiring Lead
- (1) DC Adapter Harness
- (10) Wire Holders
- (10) 3m Tape Strips
- (10) Zip Ties

Tools Required:

Isopropyl Alcohol

1

Begin by opening the liftgate. Using isopropyl alcohol, clean around the top of the glass, and down the side where the LED Light strip will be installed. Allow time to dry. Use the red dotted lines above as a reference.

2

Remove the red tape backing from the LED light strip. Carefully center the LED light strip above the liftgate glass, and apply firm even pressure to the LED light strip to ensure proper adhesion to the liftgate.

3

Connect the resistor to the LED light strip, and then connect the opposite side to either the wiring lead, or the DC adapter harness.

4

Carefully route the wiring as desired away from any damage that may occur. Secure the wiring using the supplied 3m tape strips, wire holders, and zip ties.

5

Connect the DC adapter harness plug into the DC outlet located on the driver side interior panel. Installation is now complete.
